

Assured Payment Policies

Every defined benefit pension scheme faces unique challenges along its de-risking journey. At Legal & General we continue to expand our range of pension scheme insurance solutions to meet our clients' needs.

One such solution is our Assured Payment Policy (APP). In exchange for an upfront premium, an APP provides a pre-agreed series of cashflows – fixed or inflation-linked – which do not vary with longevity or other demographic experience.

In a nutshell, APPs:

- are contracts of long-term insurance which are held as a pension scheme asset
- allow a pension scheme to lock down investment risk and provide protection against changes in asset yields, interest rates and inflation
- can reference any subset of the pension scheme's liabilities, allowing partial or full de-risking

Assured Payment Policies in action

De-risking deferreds

A pension scheme already has a pensioner buy-in in place (or is considering one at present) and is looking for a partial de-risking solution for its deferred members.

Matching bulk annuity pricing

A pension scheme wants to minimise volatility between its assets and buy-in pricing. An APP locks down investment risk now, with a clear structure for adding the remaining pension-related risks in the future to "complete the bulk annuity".

APPs as an investment

An APP allows a pension scheme to "build its own bond", with tailored inflation coverage and no exposure to market and reinvestment risk, while achieving a yield in excess of gilts.

In fact, APPs are much like buy-ins, with one key difference: they do not cover longevity risk. This means that we expect our APP pricing to be around 15-20% more affordable than a bulk annuity for deferred pensioner members. An APP can also be used to good effect on pensioner members, but the saving will be reduced.

APPs are flexible enough to be used in combination with existing de-risking solutions and arrangements. This enables a pension scheme to define its optimal, safer and more certain path through to full scheme buyout. This is true regardless of a pension scheme's size, but particularly for smaller pension schemes.

APP compared to LDI

APPs can be characterised as an evolution of LDI. An APP:

- provides bespoke and accurate cashflow matching at the outset, which should further reduce interest rate and inflation risk compared to typical duration based hedging
- passes market and reinvestment risk to Legal & General
- can provide inflation linkage for pension increases that may be difficult to otherwise accurately hedge
- reduces investment governance and running costs
- is provided by a regulated insurer and FSCS protection is expected to apply
- enables pension schemes to partner with a trusted insurer to reach the end goal of buyout

Like LDI, APPs can be restructured to accommodate actual member experience.

APPs in action: a closer look at two transactions

1. Our £400m transaction with the Legal & General Group UK Senior Pension Scheme underlines an APP's flexibility.

This transaction involved:

Investment risk protection for the pensions of 385 pensioners, as well as 200 deferred members

The APP complementing existing buy-in arrangements

The APP structured to facilitate a smooth future conversion to a buy-in

The transaction demonstrated:

- An APP's "made-to-measure" nature, which meant it could be structured around existing buy-in agreements to provide a bespoke outcome
- How an APP can cover pensioners as well as deferred members, depending on a pension scheme's requirements
- How an APP allows the pension scheme to benefit from Legal & General's back-book scale and asset sourcing capabilities

2. Our £1.1bn transaction with the AIB Group UK Pension Scheme showcases the APP's effectiveness in enabling a pension scheme to define its own optimal de-risking journey.

This transaction involved:

£850 million pensioner buy-in, converting an existing longevity insurance contract

£250 million APP, covering deferred members

Again, the facilitation of smooth future conversion to buy-in

The transaction demonstrated:

- The flexibility of an APP, which enables its use in combination with other de-risking solutions – in this case, a pensioner buy-in
- How the APP can be tailored to a pension scheme's specific needs: here, it locked down investment risk specifically for the deferred members
- How an APP is straightforward to implement, within timeframes consistent with other de-risking solutions

In both cases, benefits of the APP to the pension scheme and sponsor included:

Reduced volatility between pension scheme assets and bulk annuity pricing

Selective, tailored insurance against investment risks

Increased certainty of reaching buyout within planned timeframe
